TECHNICAL SKILLS

Backend
C# · .NET 8 / 10 · ASP.NET Core · MassTransit

Frontend
Angular · TypeScript

Cloud & DevOps
Azure · Kubernetes · Docker · Azure DevOps CI/CD

Messaging & Data
Azure Service Bus · AMQP · ElasticSearch · SQL / T-SQL

Architecture
Microservices · Event-driven design · REST APIs

Observability & Support
Grafana · Production monitoring · Incident response

CERTIFICATIONS

- **AZ-400** DevOps Engineer Expert
- **AZ-204** Azure Developer Associate
- **AZ-900** Azure Fundamentals
- **OCP** Oracle Java Professional
- **OCA** Oracle Java Associate

9+ YEARS PROFESSIONAL EXPERIENCE

PROFILE

Software Engineer with 9+ years of experience designing, delivering and supporting high-volume, business-critical systems. Specialises in .NET / C# and Azure, with full-stack experience in Angular and cloud-native delivery on Docker and Kubernetes. Takes a pragmatic, scenario-driven approach — adapting patterns, architecture and tooling to whatever best fits the problem rather than prescribing a fixed methodology. Currently at BMW, building and supporting Autonomous Transport Solutions, the platform that controls the robots moving materials through BMW plants. Previously the main developer on WeBuyCars' Buy Lead Management System via Agile Bridge, driving technical decisions and pioneering AI-assisted development with Claude Code.

EXPERIENCE

BMW · Autonomous Transport Solutions

Aug 2026 – Present

Software Engineer

.NET · C# · Angular · Azure · Kubernetes · Docker · Grafana

- Engineering the **Autonomous Transport Solutions (ATS)** platform, which controls the autonomous robots transporting materials through BMW production plants.
- Building features end-to-end across **.NET / C#** backend services and **Angular** frontends.
- Containerising and deploying services with **Docker** and **Kubernetes** on **Azure**.
- Providing **critical business support** for live plant operations — monitoring system health in Grafana, diagnosing production incidents and keeping material flow running.

Agile Bridge · WeBuyCars

Sep 2022 – Jul 2026

Software Engineer *— promoted to Solid Engineer, Jul 2024*

.NET 8 / .NET 10 · C# · MassTransit · Azure Service Bus · ElasticSearch · Docker · Azure DevOps · SQL

- Main developer on the **Buy Lead Management System (BLMS)** for WeBuyCars — a high-volume, business-critical platform at the core of the vehicle purchasing operation.
- Owned the full SDLC — requirements meetings, task and ticket creation, building, deploying and monitoring systems in production.
- Diagnosed and resolved complex bugs across deeply interconnected systems; rewrote legacy code to be optimised, performant and maintainable.
- Led **.NET 8 and .NET 10 upgrades** across BLMS and 15–20 downstream APIs; replaced MediatR with direct MassTransit event publishing across 6 microservices.
- Rebuilt the **ElasticSearch syncing pipeline** using Azure Service Bus session queues with outbox deduplication — significantly improving reliability and throughput under high load.
- Architected and launched **Inspectify** (vehicle inspection platform) in under 2 months, integrating MAHA brake testing equipment by working through complex German documentation and legacy code.
- Delivered the **Remarketing API** with zero post-deployment code fixes — surfacing re-purchasing leads from vehicles sold 2+ years prior and directly generating new business.
- Rebuilt the **TransUnion Catalogue Import** pipeline, cutting batch processing from several days to under one hour via monthly SFTP-based transfers instead of per-record API calls.
- Mentored graduate engineers and led internal knowledge-sharing sessions on MassTransit and event-driven patterns.
- Pioneered **Claude Code (Anthropic)** adoption from February 2026 — integrating AI-assisted development into daily engineering workflows and delivering measurable velocity improvements across the team.

- Hiking
- Gaming
- Technology & AI

EXPERIENCE (continued)

Stay Contactable

Sep 2019 – Aug 2022

Software Engineer

C# | ASP.NET Core | GCP | Kubernetes | Docker | Postgres | MySQL | SQL Server

- Developed a **Know Your Customer (KYC)** digital identity validation platform using C#, ASP.NET Core, Bootstrap and cloud-native GCP infrastructure with Kubernetes orchestration.
- Designed and shipped multiple scalable 3rd-party API integrations across Cassandra, MySQL, Postgres and SQL Server — all built for resilience under production load.

Online Intelligence

Oct 2017 – Aug 2019

Software Developer

Java | TCP / MQTT | SOAP / REST | Apache SOLR | Oracle SQL | MSSQL

- Built **alarm monitoring systems** in Java using TCP, MQTT, serial/COM port listeners, SOAP & REST web services, jQuery and Apache SOLR across Oracle and Microsoft SQL Server databases.
- Developed cross-platform mobile monitoring apps using Adobe PhoneGap / Cordova, extending the platform to field technicians.

EDUCATION

CTI

Jan 2016

Higher Certificate in Information Systems — 75% average

Die Hoërskool Menlo Park

2013

Matric — IT, Mathematics, Physics, Engineering Graphics & Design

SIDE PROJECTS

SqlExplorer
A faster way to navigate and query SQL databases.

Azure Exam Simulator
Practice exam tool for Microsoft Azure certifications.

Minesweeper for VS Code
Classic Minesweeper, playable inside VS Code.

.NET Cross-platform IDE
Experimental lightweight IDE for .NET on every OS.
